SUMMARY

Software Engineering Intern candidate with strong foundations in **Core Java, OOPs, and Data Structures & Algorithms**, focused on building scalable backend systems using **Spring Boot and REST APIs**. Experienced in developing real-world projects with clean, maintainable code and strong problem-solving ability. Actively practicing **DSA and system design fundamentals**, with a keen interest in **DevSecOps and secure application development**.

SKILLS SUMMARY

- **Languages:** Java (Core Java, OOPs, Collections, Exception Handling, Multithreading)
- **Backend:** Spring Boot, REST APIs, Microservices
- **Database:** MySQL, SQL
- **Tools:** Git, Docker, GitHub, Linux, Maven, Postman
- **Cloud:** AWS (EC2, S3, RDS)
- **Core CS:** Data Structures & Algorithms, DBMS, Operating Systems

PROJECTS

- **Auth Service (Spring Boot Microservice):** Built a secure authentication microservice using Spring Boot and Spring Security, implementing JWT-based authentication with refresh tokens and RBAC. Designed a normalized database schema and custom JWT filter to ensure secure and efficient request validation.
- **Expense Tracker Microservices Application:** Built a scalable full-stack Expense Tracker using Spring Boot microservices, React, and Apache Kafka, implementing JWT-based authentication and event-driven architecture to enable secure, real-time expense tracking and analytics.
- **AI Content Generator Platform:** Developed a scalable full-stack AI content generation platform using Spring Boot and Spring AI, integrating chat, image, and recipe generation via RESTful APIs with a React frontend, while handling real-world concerns like CORS, API configuration, and asynchronous data flow.
- **AI-Powered Fitness Microservices Platform:** Designed and developed a production-grade AI-powered fitness microservices platform using Spring Boot and React, implementing secure authentication with Keycloak (OAuth2/JWT), event-driven architecture with RabbitMQ, service discovery and API Gateway patterns, and integrating Gemini API for real-time personalized fitness recommendations.
- **Smart Research Assistant (Browser Extension+Gemini API):** Developed a context-aware browser extension integrated with a Spring Boot backend and Gemini API to perform real-time webpage summarization, highlighted text analysis, and structured insight generation, with efficient RESTful communication and scalable backend design.
- **AI-Audio Transcriber:** Designed and implemented a full-stack AI-powered audio transcription application using Spring Boot, Spring AI, and React.js, handling audio uploads, backend processing, and seamless frontend integration for real-time transcription output.

EDUCATION

- | | |
|--|---------------------|
| • Greater Noida Institute of Technology | Gautam Buddha Nagar |
| • <i>Bachelor of Technology - Computer Science Engineering(AI)</i> | 2023 - 2027 |
| • RPM Academy | Gorakhpur |
| • <i>Intermediate(CBSE) - PCM</i> | 2020 - 2022 |
| • Springer Public School | Gorakhpur |
| • <i>Class-10(ICSE)</i> | 2018 - 2020 |

RELEVANT COURSEWORK

- **University:** Object Oriented Programming with Java, Operating System, Data Structure, Design and Analysis of Algorithm, Database Management System
- **Additional:** Java Programming for Beginners, Introduction to MongoDB, Getting Started with Docker
- **MOOCs:** The Joy of Computing using Python

AWARDS AND ACHIEVEMENTS

- Semi-Finalist – Yukti NIR Startup Challenge Hackathon 2025 .
- Solved 75+ DSA problems on LeetCode, strengthening algorithmic thinking
- Built and deployed 5+ full-stack and AI-integrated applications using modern backend architecture
